Lecture – 01

By – Ritik Sir

Topics

to be covered

1 Basic Proportionality Theorem (**Thales Theorem**)

2 Converse of Basic Proportionality Theorem

~~Date~~

- A) 6-8 60%
- B) 9-12 20%
- C) 12-15 10%
- D) 15 key board. 10%

- ✓ A) 6 54%
- ✓ B) 7 14%
- ✓ C) 8 26%

1

- A) 12:00 (40%)
- B) 2:00 (20%)
- C) 3:00
- D) 4:00

WORK HARD
DREAM BIG
NEVER GIVE UP !!

Basic proportionality theorem.

(Thale's theorem)

If (Agar) $DE \parallel BC$ (Thala? ❤️)

then, (toh)

$$\frac{AD}{DB} = \frac{AE}{EC}$$

then,

$$\frac{PO}{OR} = \frac{PC}{CQ}$$

$$\frac{AD}{DB} = \frac{EC}{AE}$$

False //

$DE \parallel BC$

① $\frac{AD}{DB} = \frac{AE}{EC}$

② $\frac{AD}{AB} = \frac{AE}{AC}$

③ $\frac{DB}{AB} = \frac{EC}{AC}$

Corollary

R.P.T

To prove: $\frac{AD}{AB} = \frac{AE}{AC}$

$$\frac{DB+AD}{AD} = \frac{EC+AE}{AE}$$

By B.P.T

$$\frac{AD}{DB} = \frac{AE}{EC}$$

$$\frac{DB}{AD} = \frac{EC}{AE}$$

$$\frac{DB}{AD} + 1 = \frac{EC}{AE} + 1 \quad \leftarrow \text{Add ① both sides.}$$

$$\frac{AB}{AD} = \frac{AC}{AE}$$

$$\frac{AD}{AB} = \frac{AE}{AC}$$

Since $DE \parallel BC$

∴

G: $DE \parallel BC$

top: $\boxed{\frac{DB}{AB} = \frac{EC}{AC}}$

Since $DE \parallel BC$
∴ By B.P.T

$$\boxed{\frac{AD}{DB} = \frac{AE}{EC}}$$

$$\frac{AD}{DB} + 1 = \frac{AE}{EC} + 1$$

$$\frac{AD+DB}{DB} = \frac{AE+EC}{EC}$$

$$\frac{AB}{DB} = \frac{AC}{EC}$$

$$\boxed{\frac{DB}{AB} = \frac{EC}{AC}} //$$

#Q. In fig. $DE \parallel BC$. If $AD = x$, $DB = x - 2$, $AE = x + 2$ and $EC = x - 1$, find the value of x .

Given: $DE \parallel BC$

To find: x

Sol: $DE \parallel BC$

By Thales's theorem -

$$\frac{AD}{DB} = \frac{AE}{EC}$$

$$\frac{x}{x-2} = \frac{x+2}{x-1}$$

$$x(x-1) = (x-2)(x+2)$$

$$x^2 - x = x^2 - 4$$

$$x = 4$$

#Q. In $\triangle ABC$, if X and Y are points on AB and AC respectively such that $\frac{AX}{XB} = \frac{3}{4}$,
 $AY = 5$ and $YC = 9$, then state whether XY and BC parallel or not.

[CBSE Term - 1, 2015, 2016]

$$\frac{AX}{XB} = \frac{3}{4}$$

$$\frac{AY}{YC} = \frac{5}{9}$$

not parallel

$$\frac{AX}{XB} \neq \frac{AY}{YC}$$

Converse of BPT

If, (Ass) $\frac{AD}{DB} = \frac{AE}{EC}$

then, (to h) $DE \parallel BC$

Topic : BPT

#Q. In fig. $PQ \parallel BC$ and $PR \parallel CD$. Prove that

(i) $\frac{AR}{AD} = \frac{AQ}{AB}$

(ii) $\frac{QB}{AQ} = \frac{DR}{AR}$

From (1) and (2)

$\frac{AR}{AD} = \frac{AQ}{AB}$

#Q. In fig. $DE \parallel BC$ and $CD \parallel EF$. Prove that $AD^2 = AB \times AF$.

[CBSE 2007]

$$\frac{AD}{AB} = \frac{AE}{AC} \quad \text{--- (1)}$$

$$\frac{AF}{AD} = \frac{AE}{AC} \quad \text{--- (2)}$$

$$\therefore \frac{AD}{AB} = \frac{AF}{AD}$$

$$AD^2 = AB \times AF$$

#Q. $DE \parallel AC$ and $DC \parallel AP$, prove that $\frac{BE}{EC} = \frac{BC}{CP}$

H/w

I will be ^oo you.

Homework

DPP → try

next class wait.

THANK
YOU
